Computer Engineering Student · Software Developer

ABOUT

Computer Engineering student with hands-on experience in software development, backend systems and database-driven applications. Experienced in C, C#, Java and .NET-based development with practical knowledge of ASP.NET Core, SQL and modern software development practices. Developed and maintained multiple academic and professional projects, including a deployed personal portfolio application. Comfortable using AI-assisted development tools for research, implementation, debugging, refactoring and problem solving.

EXPERIENCE

Software Development Intern – TRTek Yazılım

- Contributed to software development projects using modern backend and web development Technologies.
- Worked with ASP.NET/ .NET-based application architecture and database-driven systems.
- Implemented application features by following layered architecture and separation of concerns principles.
- Worked with database operations, validation, API/backend logic and application configuration.

SELECTED PROJECTS

Event Management Platform: C#, ASP.NET Core MVC, Entity Framework Core, Clean Architecture.
Developed an event management application using ASP.NET Core MVC and Entity Framework Core. Designed the application around Clean Architecture principles to maintain separation of concerns and improve maintainability. Implemented database-driven application functionality using Entity Framework Core.

Email Marketing Application: C#, .NET Core, N-Tier Architecture, SMTP Authentication.
Developed a secure .NET Core application for managing bulk email campaigns through users' own SMTP servers. Implemented user authentication and campaign management functionality. Structured the application using N-Tier Architecture to maintain a modular and maintainable codebase.

NoSQL-to-SQL Converter: Python, JSON, SQL, Data Processing.
Developed a dynamic converter for transforming schema-less JSON data into relational database structures. Implemented data processing logic to infer and transform NoSQL-style data into SQL-compatible structures. Focused on automating the conversion process between schema-less and relational data models.

LIDAR Sensor Graph Analysis: C, Allegro 5, Libcurl, RANSAC.
Developed a LIDAR data processing application for analyzing sensor measurements and detecting geometric structures. Implemented RANSAC-based line detection for extracting meaningful lines from LiDAR data. Built real-time data visualization using Allegro 5 and integrated Libcurl for data handling.

EDUCATION

Computer Engineering
Kocaeli Üniversitesi 2024-2028
GPA: 3.37

HOBBIES

Drawing
Playing guitar and ukulele
Playing volleyball

LANGUAGES

Turkish Native
English B1
